Claim 5; Page 46-48; 63pp; English.

The present invention describes a method for the production of 3-hydroxypropionic acid (3-HP). The method comprises fermenting a recombinant microorganism in the presence of a source of glycerol (1) or glucose, where the microorganism: (1) expresses genes for non-native enzymes which catalyse the production of (3-HP) from (1); (ii) carries genetic constructions for the expression of a glycerol dehydratase (GDHT) and aldehyde dehydrogenase (4BH) capable of catalysing the production of (3-HP) from (1); or (iii) carries a genetic construct an ADH capable of catalysing the production of (3-HP) from (1); or (iii) carries a genetic construct an ADH capable of catalysing the production of (3-HP) from (1); a first and a monomer, and is useful e.g. in the production of absorbable prosthetic devices and surgical sutures or for incorporation into beta-lactams, production of actylic acid or formation of trifineromethylated alcohols Incorporation of genes encoding two enzymes makes the host organisms able to produce (3-HP) from (1). The biotechnological method of preparing (3-HP) is potentially cheaper than chemical synthesis. The present sequence represents the E. coli aldehyde dehydrogenase aldb, which is used in the exemplification of the present invention. or diols, polyhydroxyalkonates and copolymers with lactic acid

sequences from the Corporators at manager or navious appropriate superior that the corporators are useful for identifying the mutation point of a gene derived from a mutant of corporatorm bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from corporatorm bacterium, and identifying a homologue of a gene derived from corporatorm bacterium, corporatorm bacterium, are useful for producing amino acids, nucleic acids, vitamins, see derived and organic acids, particularly Liysiae. The present sequence is a protein described in the exemplification of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formal directly from the European Patent office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       132 RYPASCIRAQEGGISEVOSETVAYHEHEPLGVVGQIIPWNFPLLMASWKMAFALAAGNCV 191

acid, a diol, a carbohydrate, an aromatic compound, a vitanin, a cofactor, a polyketide, or an enzyme. The presence of (1) or SMP proteins (11) encoded by them are used for disquesting the presence of activity of Corynebacterium diphtheriae in a subject. (11), (11), (11) or host ceils containing them are used to map genomes of organisms related to the gradient in dentity and localise C. giutamicum sequences of interest, in evolutionary studies, in determining SMF protein regions required for function, in modulating SMF protein regions required for function, in modulating SMF protein regions required metabolism of sugars, and in modulating high, energy molecule production
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             72 HKVKDKWAHTSVQDRAATUFKTADRMEQNIELLATAPTWUNGKPTRETSAADVPLAIDHP 131

                                                                                                                                                                                                                                                                                                                                                                                                                                             metabolism and oxidative phosphorylation (SMP) proteins given in AAB79243 to AAB 79633 which are involved in carbon metabolism and energy production. The C. glutamicum SMP gene can be used in vectors (II) for expression in host cells and production or modulation of production of fine chemicals, such as, an organic acid a proteinogenic or nonproteinogenic amino acid (preferred), a purine or pyrimidine base, a nucleoside, a nucleoside, a lipid, a saturated or unsaturated fatty
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            187 VMKEAEQTHASILYLINIIGDLIPESVLNIVNSDAGEAGAALSGSNFISKIAFTGSTEVA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           for identifying expressed genes. (1) is useful in gene therapy techniques to restore normal activity of (11) or to treat disease states involving (11). (11) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as melecular weight markers and as a food supplement. (11) and its binding partners are useful in medical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucieotide sequences have applications in diagnostics, forenside mapping, indentification of mutations responsible for genetic disorders or other traite to access biodiversity and to produce other types of data and products dependent on bNA and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PPR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymereotides are also used in diagnostics as expressed sequence tags
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New isolated polynucleotide and encoded polypoptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; chromosome mapping; gene mapping; gene therapy; forensic; tood supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to isolated polynucleotide (1) and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1229 NVVNGAGGVIGEYLATSKKIAKVAFTGSTEVGQQIMQYATQNIIPVTLELGGKSPNIFFA 1288
                                                                                                          The invention relates to isolated polynuclectide (1) and polypeptide (11) sequences. (1) is useful as hybridisation probes, polypeptide (11) sequences. (1) is useful as hybridisation probes, and gene mapping, and in recombinant production of (11). The polynucleotides are also used in diagnostics as expressed sequence tages for identifying expressed genes. (1) is useful in gene therapy techniques to restore normal activity of (11) or to treat district states involving quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (11) and its binding partners are useful in medical discorders involving aberrant protein expression or biological activity discorders involving aberrant protein expression or biological activity the polypeptide and polynucleotide sequences have applications in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                280 DVMDEEDAFFDKALEGFALFAFNQGEVCTTPSPALVQESIYEPFMERAIPPVFSIRSGNP 339
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                100 NLELLATAETWDNGKPIRETSAADVPLAIDHFRYFASCIPAQEGGISEVDSETVAYHFHE 159
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               σ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess brodiversity and to produce other types of data and produce therefore other types of data and produce dependent on DNA and amino acid sequences. ABG20401-ABG30377 represent novel human diagnostic amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at Itp.wip.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               4.4. to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discoverty of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aeruqinosa and Enterococcus facelis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  85 DRAAILFKIADRMEQNLELLATAETWDNGKPIRETSAADVPLAIDHFRYFASCIRAQEGG 144
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              145 ISEVDSETVAYHFHEPLGVVGQIIPWNFPLLMASWKMAPALAAGNCVVLKPARLTPLSVL 204
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   205 LLMETVODLLPFCVVNVVNGAGGVIGEYLATSKRIAKVAFTGSTEVGQGIMQYATQNIIF 264

The new DNA sequences found their transments) are useful as primers or probes for isolating homologues of any of the 5191 Stantous DNA sequences contained on the computer readable medium.
                                            367 GLOKGAFLAPTILANGTNIMOVAQERIFGPVATVIKERTERVIRLANDSEYGLOGAVES 4.26
                                                                                                                   invention. The INA sequences encoding the Staurous proteins are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read only memory (RAM) or 10 RAM. Homelogy searches using the Staurous that sequences allows putative functions to be assigned so that protein encoding or regulatory regions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence represents a Staphylococcus aureus protein sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode actious have been identified and these polypeptides can be used in a vaccine composition against Scaurens infection. The polypeptides can also be used in a kit for the imminodetection of Scauteus in a sample. Scaureus is implicated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Computer readable medium; vaccine; S.aureus Infection; immunodetection; cellulitis; eyelid infection; food poisoning; osteomyelitis; therapy; skin infection; surgical wound infection; scalded skin syndrome;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            in numerous human diseases, including cellulitis, eyelid intections, I
poisoning, esteomyelitis, skin and surgical wound intections, scalded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polynucleotide(s) and proteins derived from Staphylococeus aureus stored on computer readable medium and used in the production of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Barash SC, Choi GH, Dillon PJ, Fannon MR, Kunsch CA;

                                                                                      ARNAUS, A to ABNAUS represent. Staphylococous apidermidis open reading frame (OPE) machele acid sequences which encode the amino acid sequences given in ARESTIZ4 to ARESTIGO The S. epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections The sequences can be used to screen for compounds able to interfere with the S. epidermidis life
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          25 YDNFIGGEWVAPADGEYYQNLFPVFGQLLCEVASSGKKDIDLALDAAHKVKDKWAHTSVQ 84

Human aldehyde dehydrogenase ALDHZ protein sequence SEQ ID NO:4

26-JUN-2001 (first entry)

```
The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, ollgomens, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy Lechniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          301 FNQGEVCTCPSRALVQESIYERFMERAIRRVESIRSGNPLDSVTQMGAQVSHGQLETILN 360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              an ADH capable of catalysing the production of (i HP) from (1). I HP is a monomer, and is useful e.g. in the production of absorbable prosthetic devices and surgical sutures or for incorporation into beta-lactams,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       28 FIGGEWVAPADGEYYONIJPVTGOLIJJEVASSGKRDIDLALD- AAHKVKDKWAHISVU 84

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         3-hydroxypropionic acid (3-HP). The method comprises fermenting a recombinant microordanism in the presence of a source of algorithm of glucose, where the microordanism: (i) expresses genes for non-native enzymes which catalyse the production of (3-HP) from (1); (ii) carries genetic constructions for the expression of a alycerol dehydratase (GDHT) and aldehyde dehydrogenase (AMH) capable of catalysing the production of (3-HP) from (1); or (iii) carries which expresses the dham gene from Klebsiella pneumoniae and a gene for which expresses the dham gene from Klebsiella pneumoniae and a gene for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             production of acrylic acid or formation of trifluoromethylated alcohols of ducis, polyhydroxyalkonates and copolymers with lastic acid. Incorporation of genes encoding two enzymes makes the fest organisms able to produce (3-HP) from (1). The biotechnological method of preparing (3-HP) is potentially cheaper than chemical synthesis. The

New genetic variants with polymorphisms in the aldehyde dehydrogenase 5 (ALDH5) gene, useful for studying the function of ALDH5, and for expressing ALDH5 protein which is useful in screening drugs for

treating ALDH5-related diseases

Claim 30; Page 72-74; 96pp; English

human aldehyde dehydrogenase 5 (LDH5) gene containing polymorphic sites.

The polymorphic ALDH5 variant is useful in studying the effect of the variation on the biological activity of ALDH5 and on the binding affinity of candidate drugs targeting ALDH5 four the treatment of alcoholism and alcohol-induced disorders. Polymorleotides comprising a polymorphic gene variant or fragment may be used for therapeutic purposes. ALDH5 protein isoforms may be used in assays to measure the binding affinities of one or more candidate drugs targeting the ALDH5 protein soforms may be used in assays to measure the binding affinities of one or more candidate drugs targeting the ALDH5 protein may be used to generate antibodies. Haplotyping method can be used by scientists to validate ALDH5 as a candidate candidate candidate associated with ALDH5 activity, and in the design of clinical trials of candidate drugs for treating a specific condition or disease predicted to be candidate drugs for treating a specific condition or disease predicted to be associated with ALDH5 activity. Information on polymorphisms on the ALDH5 activity information on polymorphisms on the ALDH5 drugs for treating a specific condition or disease predicted to be associated with ALDH5 activity. Information on polymorphisms on the ALDH5 drugs for the plant of the biological trials of the ALDH5 drugs for the plant of the biological trials of the ALDH5 drugs. ALDH5 as well as in identifying drugs targeting this protein for the treatment of disorders related to its abnormal expression or function. The products of the invention have antialcoholic activity. This sequence represents the human ALDH5 protein described in the disclosure of the This invention describes a novel isolated genes and haplotypes of the invention.

New genetic variants with polymorphisms in the aldehyde dehydrogenase 5 (ALDH5) gene, useful for studying the function of ALDH5, and for expressing ALDH5 protein which is useful in screening drugs for treating ALDH5-related diseases

Disclosure; Fiq 3; 96pp; English.

This invention describes a novel isolated genes and haplotypes of the human aldehyde dehydrodenase 5 (ALMS) erne containing polymorphic sites. The polymorphic ALMS variant is useful in studying the effect of the variation on the biological activity of ALMS and on the binding affinity of candidate drugs targeting ALMS to the treatment of ALDHS as well as in identifying drugs targeting this protein for the treatment of disorders related to its abnormal expression or function. The products of the invention have antialcoholic activity. This sequence represents the human ALDHS polymorphic variant protein described in the disclosure of the invention. protein. ALDHS proteins may be used to generate antibodies. Haplotyping method can be used by scientists to validate ALDH5 as a candidate target for treating a specific condition or disease predicted to be associated with ALDH5 activity, and in the design of clinical trials of alcoholism and alcohol-induced disorders. Polynucleotides comprising a polymorphic gene variant or tragment may be used for therapeutic purposes. ALDHS protein isoforms may be used in assays to measure the candidate drugs for treating a specific condition of disease predicted to be associated with ALMES activity. Information on polymorphisms on the ALDHS gene can be applied for studying the biological tanction of binding attinities of one or more candidate drugs targeting the ALDHS professes where the ALDHS brokesses were the ALDHS brokesses were the ALDHS brokesses were the contracting the ALDHS brokesses were the contractions and the contractions are the contractions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            348 QLNKILKYVDIGKNEGATLITGGERL-----GSKGYFIKPTV-FGDVKEDMRIVKEEIFG 401
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       112 PVLAVTTEKTMEEALELANDTQYGLGAGVWSPNGNLAYKMGPG1QAGRVWTNCYHAYPAH 471
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   92 PVV?VTKEKSADEVINMANDSEYGLAAGIHTSNINTALKVADRVNAGTVWINTYNDFHHA 461
                                                                                                                                                                                                                                                                                                                                                                                                                                             3-hydroxypropionic acid (3-HH). The method comprises formenting a recombinant microcrapism in the presence of a source of glycorol (1) or glucose, where the microcrapism (1) expresses genes for non-native enzymes which catalyse the production of (3-HP) from (1); (1) carries genetic constructions for the expression of a glycerol dehydratase genetic construct of the expression of a glycerol dehydratase production of (3-HP) from (1); or (11) carries a genetic construct which expresses the dhas gene from Klebsisella procumoniae and a gene for an Alb capable of catalysing the production of (3-HP) from (1). 3-HP is a monomer, and is useful e.g. in the production of (3-HP) from (1). 3-HP is production of acidical prospection into beta lactams, production of acidic acidic formation of filling monethylated aluchols or diols, polyhydroxyalkonates and expenses with lactic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Incorporation of genes encoding two enzymes makes the host organisms able to produce (3-HP) from (1). The biotechnological method of preparing (3-HP) is potentially cheaper than chemical synthesis. The present sequence represents the yeast aldebyde dehydrogenase ALD4, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     23° TSKPIAKVAFTGSTFVSQQIMQVATQNIIRVTLELGGKSPNIVFAFVMFFFDAFFFKAFF
